

### A Synchronized “Triple Threat”

By automating threat discovery, isolation, and response, Synchronized Security revolutionizes threat detection. Incident response times are reduced, tactical resources can be refocused on strategic analysis, and IT costs come down.

### Rapid Threat Discovery

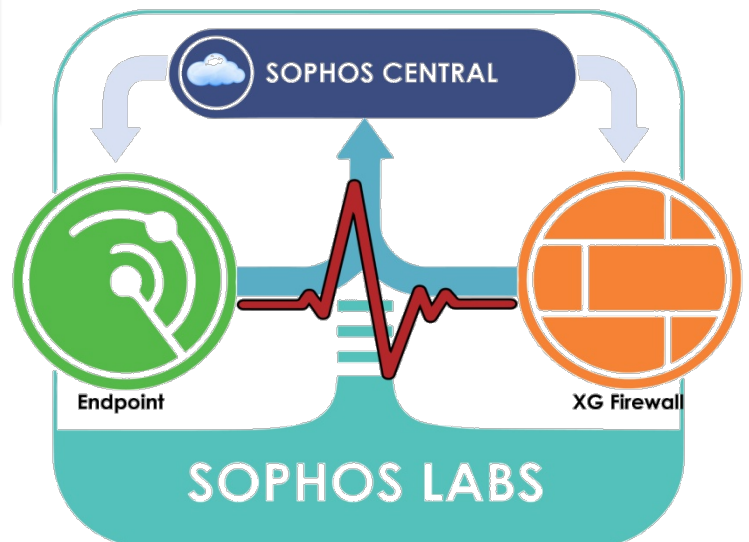

Advanced threat indicators like suspicious network traffic are instantly shared between the Next-Gen Firewall and the Next-Gen Endpoint to detect and prevent attacks.

### Proactive Threat Isolation

Active identification of compromised systems shares computer names, users and paths between your Endpoint and Firewall, so you can take action quickly.

### Automated Threat Response

Compromised endpoints are automatically isolated by the firewall, while the endpoint terminates and removes malicious software. All this *and* you save time and money.

The Secret is Synchronization
